

Active Workspace Customization Training Agenda

Training Overview

This training session is planned to provide a structured understanding of **Active Workspace administration and customization in Teamcenter**. The sessions will cover both configuration and development aspects with practical demonstrations and examples.

The training will focus on commonly used customization techniques and development practices in Active Workspace.

Day 1 – Active Workspace Architecture and Client Customization

1. Active Workspace Overview

- Active Workspace architecture overview
- Active Workspace components and services
- Active Workspace development environment
- Stage directory structure
- Module and solution structure

2. Workspace Configuration

- Workspace concepts
- Creating custom workspaces
- Workspace configuration files
- Workspace mapping to Groups and Roles
- Workspace verification

3. Declarative Customization

- Declarative customization concepts
- Declarative module structure

Views and ViewModels

- View (.html) structure
- ViewModel (.json) structure
- Actions configuration
- Conditions configuration

4. Commands and UI Configuration

- Command creation
- Command handlers
- Command placements
- Visibility conditions

5. Stylesheets and UI Configuration

- Stylesheet (XRT) configuration
- Object page customization
- Summary page customization

6. Themes and Icons

- Theme configuration
- Icon configuration
- Custom icons

Day 2 – Advanced Customization and Integration

1. Active Workspace Services

OOTB Services

- Calling OOTB services
- Service configuration

Custom Services

- Custom service integration
- Service calls from Active Workspace

2. Client and Server Customization

- Client-side customization overview
- Server-side customization overview
- Integration between client and server

3. Build and Deployment

- Build process
- Publish process
- Deployment steps
- Verification process

Practical Demonstrations

The training will include practical demonstrations such as:

- Creating custom workspace
- Creating commands
- Creating panels
- Stylesheet configuration
- Service integration
- Build and deployment

Expected Outcome

After completing this training, participants will be able to:

- Understand Active Workspace architecture
- Configure workspaces
- Perform declarative customization
- Create commands and UI components
- Configure stylesheets
- Integrate services
- Build and deploy customizations
